Enabling Analytics in IP Cameras:

04/10/2018

Provision-ISR is delighted to release the newly added video analytics.

This includes:

1) Camera Tampering

2) Line crossing

3) Sterile Area

Analytics can be enabled only on 2MP IP Cameras from "Eye-Sight" Series running v4.x and up.
The model names are xxx-39xIP5yyy.

Steps for enabling analytics:

1) Download the compressed file containing all the necessary files for this process by clicking here.

2) Extract all the files from the downloaded file.

3) Update the IPC to the latest version (4.2.1.0(18829)) using the file "v4.2.1 for 2MP IPC Eye-Sight Series.tar".

4) Run the program "analytics Tool.exe"
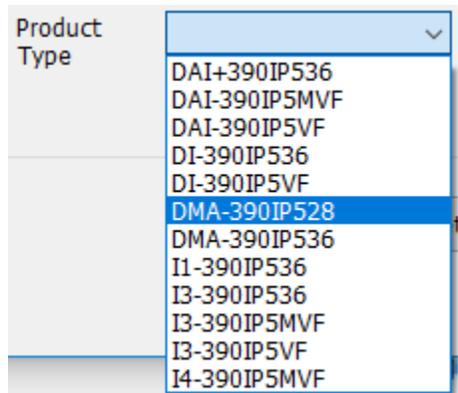

5) Browse and select the profile "2MP Eye-sight 4.2.1.fac"

Select a profile	C:\Users\pini\Desktop\2MP Eye-sight 4.2.1.fac	Browse

6) Choose from the list all the cameras **from the same model. Please note:** setting the wrong camera model with the wrong profile might cause the camera to malfunction.

7) Choose from the "Product Type" Drop-down list the correct camera model.

For example: If you chose DMA-390IP528 for enabling the analytics,

☑	74:F8:DB:56:31:E5	DMA-390IP528	DMA-390IP528	4.2.1.0(18829)

You should choose DMA-390IP528 from the "Product Type" List.

Product
Type

DAI+390IP536
DAI-390IP5MVF
DAI-390IP5VF
DI-390IP536
DI-390IP5VF
DMA-390IP528
DMA-390IP536
I1-390IP536
I3-390IP536
I3-390IP5MVF
I3-390IP5VF
I4-390IP5MVF

8) Click on "Set default configuration". The camera will reboot automatically. **All settings and configuration will be restored to factory default.**

9) After the restart, Analytics will be enabled in the camera configuration menu.
